

## Cheetah upgrades CMD-EL

Cheetah Technologies has increased manufacturing capacity on its CMD-EL DOCSIS-based end-of-line RF monitors.

The Cheetah CMD-EL can reduce the labor-intensive job of FCC Proofs by automating the process and eliminating the need for costly truck rolls. The CMD-EL, with the CheetahLynx Controller, can completely automate and perform FCC 24-hour level variance tests, as well as calculate the six-month

variance. It is also the only strand-mounted RF device that has the capability to

monitor and alarm on out-of-tolerance conditions on analog and DOCSIS channels, the company said.

*Cheetah is located at booth 16081.*

## Anda helps ops with business services

Anda Networks' carrier-class portfolio of Ethernet access and real-time monitoring solutions is now available to help cable operators deliver revenue-generating business services and mobile backhaul over their networks with demonstrable SLAs.

With Anda's EtherReach network termination equipment and EtherEdge aggregation solutions, ops can generate new revenue opportunities by delivering Ethernet private lines, transparent LAN services, managed VPNs and bundled voice, video and data transport services.

Integrated with the EtherProbe real-time monitoring solution, Anda's equipment platforms allow

Anda's EtherReach

MSOs to non-intrusively, remotely monitor and measure carrier Ethernet traffic in real time, without additional test equipment or operator intervention.

EtherProbe is a stand-alone Ethernet traffic monitoring and SLA verification solution, eliminating the need for placing expensive external performance-monitoring data collection tools on either end of the transmission link. Cable ops benefit by providing true Carrier Ethernet 2.0 capabilities, including QoS metrics collection, SLA

verification and enhanced degradation protection for their Ethernet business services.

"Anda's full suite of Ethernet access and aggregation equipment coupled with the integrated test and performance measurement software enables cable operators to meet and exceed the resiliency and reliability that they demand from their copper, fiber or wireless network connections," said Greg Gum, CMO of Anda Networks.

*Anda is located at booth 6073.*

## SeaChange enables CDNs

SeaChange International has unveiled a range of products to help broadband operators time-shift and place-shift video to any screen.

SeaChange said that this is

the first wave of the company's CDN lineup.

SeaChange is featuring the following products, which capitalize on the emergence of IP networks and SeaChange's Axiom On Demand platform:

Universal Resource Manager, RS-DVR solution, AssetFlow Content Management System and Flash Memory Streamer 2500.

*SeaChange is located at booths 4088 and 15.*
